

Unicode Template

by
Bhikkhu Pesala

This template was designed for A4 paper in Open Office 2.02 using [Verajja](#), a Unicode font derived from Bitstream Vera. It includes a wide range of glyphs, but does not attempt to cover the full Unicode range, which would make this document too big to be practical. If you need other character sets, it is easy to insert further pairs of table rows using the "Caption" and "Glyph" paragraph styles.

Characters reserved by Unicode.org are indicated by a grey cell background, which is also used where there is a gap in the natural sequence of numbering. (In the Latin extended character sets I have changed the strict numerical ordering to align Uppercase and Lowercase).

The .notdef glyph will be displayed if the font does not include that glyph. Some table cells are left empty for filling in later.

To use the template for your font, just edit the paragraph style "Glyph" to use your font and, if necessary, adjust the point size to suit the typeface. If you do this, you may need to manually adjust the page breaks to keep the caption rows with the preceding Glyph rows to which they refer. You may also like to modify the other styles to match. The caption style uses Verdana, an easy to read font that most users will have installed.

The character blocks are separated by a table row with a heavy line at the bottom. Where a page break is needed within a block, I have added a table row using the "Block" paragraph style as a footer for the current block, but I have not added the heavy line.

I have divided the Private Use Area for my own convenience. I use the first section for stacking diacritics and low profile diacritics. These codepoints are used by [FontCreator](#)[™] to automatically generate composites for Vietnamese. I have used the Private Use range from 57465-57490 for Small Capitals. Some of my fonts have a separate Small Capitals typestyle as part of the font family, while Verajja includes Small Capitals in the Private Use Area. You might like to use the range 57448-57457 for Old Style Figures. The Private Use Area is large (6,400) characters, and there is no standard way to use it. These are my personal choices.

The Greek Extended character set uses Gentium, an attractive free font available from [my fonts page](#). Verajja doesn't yet include a full set of Greek Extended glyphs

[Babelmap](#) was extremely helpful in creating this template. It allows cut and paste of characters and codepoints in hex or decimal encoding.
